November 30, 2021

The **GFAR Partners in Action campaign** celebrates the achievements of our diverse network of partners who are working together to shape a new, sustainable future for agriculture and food. Each month we showcase stories submitted by Partners in GFAR related to a key theme in agri-food research and innovation.

To help mark this year's COP26, the UN Climate Change Conference, our theme for November was 'Building resilience to climate shocks'. Read the latest contributions from our network of partners.

Bolstering Kenyan farmers' resilience to climate shocks

Like the rest of the world, Kenya's climate is changing. The rainy seasons' timing and duration have shifted, making them exceedingly unpredictable. Climate change poses a significant danger to agriculture, food security, and poverty alleviation. Agriculture contributes to climate change by

Building food systems resilience in the West African Sahel

The West African Sahel is at the frontline of climate change with severe land degradation, water scarcity and soil erosion problems that are expected to increase in the coming years. Due to the Sahel region providing food and basic income to millions of people, several social and economic factors are increasing the pressure on the region's natural resources...

Woody perennials building resilience in urban and rural landscapes

Plants are an important source for the sustenance of life on this planet. Among the plants, some plants are perennial, i.e. their vegetative and reproductive stage continues throughout the year.

These 'woody perennials' include trees, palms, bamboo and shrubs. Yet, mostly woody perennials are referred to simply as trees...

To recognize the International Day of Rural Women on October 15, our theme for October was 'Closing the gender gap in agriculture'. Read the latest contribution from our network of partners.

Addressing social norms to help women access agricultural technologies

Women are an important asset to the global agricultural workforce, making up 43% of the farming sector, but despite the key role they play, they often do not control decision-making on family farms and are left marginalized.

Many sustainable agricultural technologies remain out of reach – when organisations develop technologies for farmers, they often

December theme: Farming in a post-COVID world

GFAR Partners in Action

Celebrating our diverse network of partners who are working together to shape a new, sustainable future for agriculture and food.

#GFARinAction

Next month's theme is 'Farming in a post-COVID world'. Over the next few

contribute a blog for December.
